

AI Research Agent

Problem Statement

Researchers, students, and professionals spend a significant amount of time searching through research papers, articles, and online resources to find relevant information. This process is often time-consuming and can make it difficult to identify accurate, useful insights quickly.

Proposed Solution

The AI Research Agent, developed using IBM watsonx.ai, provides an intelligent assistant that can understand user queries, analyze research content, summarize lengthy documents, answer research-related questions, and generate concise insights. This helps users save time and improve the quality of their research.

Objectives

- Reduce the time required for research.
- Provide accurate and context-aware answers.
- Summarize lengthy documents and articles.
- Improve productivity for students and researchers.
- Make research information easier to understand.

Technologies Used

- IBM watsonx.ai
- IBM Cloud
- Artificial Intelligence
- Natural Language Processing (NLP)

Expected Outcome

The Research Agent enables users to obtain reliable information quickly, summarize complex research, and improve decision-making through AI-powered assistance.
